**DATA EVALUATION RECORD  
FRESHWATER FISH EARLY LIFE-STAGE TEST  
GUIDELINE 72-4 (A)**

(12-20-95)

1. CHEMICAL: Pirate® AC 303,630 Shaughnessy #: 129093  
2. TEST MATERIAL: CL 303,630 (AC 303,630) Purity: 94.5%  
3. CITATION:

Authors: Ward, G., Scott, McElwee, C., Lintott,  
D., Wisk, Joseph D.  
Title: Early Life-Stage Toxicity of AC 303,630  
in Rainbow Trout (*Oncorhynchus mykiss*)  
Study Completion Date: November 19, 1993  
Laboratory: Toxikon Environmental Sciences, 106  
Coastal Way, Jupiter, Florida 33477  
Laboratory Report ID: J9201015  
Sponsor: American Cyanamid Company, Agricultural  
Research Division, P.O. Box 400,  
Princeton, NJ 08543-0400  
MRID No.: 434928-19  
DP Barcode: D210808

4. REVIEWED BY: William Evans, Biologist  
Ecological Effects Branch  
Environmental Fate and Effects Division

**Signature:**  **Date:** 12/16/96

5. APPROVED BY: Ann Stavola, Section Chief, Section 5  
Ecological Effects Branch  
Environmental Fate and Effects Division

**Signature:** A. M. Stark **Date:** 12/20/96

6. **CONCLUSIONS:** For the first 77 days of the exposure phase of the study, dissolved oxygen (DO) was maintained above 75% saturation (with one exception). However, after day 77, DO levels dropped, but stayed above 54% saturation. Further, true toxicological effects based on mortality first appeared at the 7.64  $\mu\text{g} \cdot \text{L}$  level on day 38 of the study. This study has therefore been classified as Core with a calculated MATC of 5.3  $\mu\text{g}/\text{L}$  based on the survival of juvenile rainbow trout. The NOEC was 3.68  $\mu\text{g}/\text{L}$ .

7. ADEQUACY OF THE STUDY:

- A. Classification: Core
  - B. Rationale: See 6. above.
  - C. Reparability: N/A

**8. MAJOR GUIDELINE DEVIATIONS:**

1. Water temperature should not deviate by more than 2°C from appropriate temperature (12°C for rainbow trout). Test temperature ranged from 9.1 - 16°C. throughout test.
2. The dissolved oxygen (DO) level was maintained above 54% saturation. Guideline criteria require that DO concentration must be above 75% saturation. ASTM guidelines recommend maintaining above 60% saturation.
3. Replicate data was not included for hatching time or time to swim-up.

**9. MATERIALS AND METHODS:****A. Biological System:**

Guideline Criteria	Reported Information
<b>Species:</b> Any of several freshwater fish species, including rainbow trout, brook trout, bluegill, fathead minnow, and channel catfish. See SEP for complete listing.	Test species was Rainbow trout ( <i>Oncorhynchus mykiss</i> )
<b>Source</b>	Mt Lassen Trout Farm, Red Bluff, CA
<b>Age at beginning of test:</b> Embryos 2 to 24 hours old.	Eggs distributed to test chambers ~4 hr. after fertilization.
<b>Replicates:</b> Minimum of 20 embryos per replicate cup, 4 replicates per concentration.  Minimum of 30 fish per treatment for post-hatch exposure.	80 embryos (40 per embryo chamber) were distributed to each replicate, 2 replicates per concentration. (2 additional chambers with 40-embryos were added to each replicate control.)  30 alevins & fish per treatment were released.

Guideline Criteria	Reported Information
<b>Post Hatch:</b> % of embryos that produce live fry must be $\geq$ 50% in each control; % hatch in any control embryo cup must be no more than 1.6 times that in another control cup.	Hatching success was $>$ 50% in each control and the greatest % hatch was 1.54 times that of another cup.
<b>Feeding:</b> Fish should be fed at least twice daily. Fish should not be fed for at least 24 hr prior to termination on day 32.	Fish fed 2-3 times a day up to 1 day before test termination.
<b>Counts:</b> At a minimum, live fish should be counted 11, 18, 25, and 32 days after hatching.	Survival was monitored daily until test termination at 61 days
<b>Controls:</b> Avg. survival at end of test must be $\geq$ 80%. Survival in any control chamber must not be $<$ 70%.	Control survival ranged from 97 to 100% in control and solvent controls.
<b>Controls:</b> Negative control and carrier control (when applicable) are required.	Solvent control of 2.3 to 2.9 $\mu\text{l}$ Dimethylformamide (DMF)/L was used.

Comments:B. Physical System:

Guideline Criteria	Reported Information
<b>Test Water:</b> 1) May be natural or reconstituted; 2) Natural water should be sterilized with UV and tested for pesticides, heavy metals, and other possible contaminants. 3) Hardness of 40 to 48 mg/L as $\text{CaCO}_3$ and pH of 7.2 to 7.6 is recommended.	Dilution water was reconstituted treated water. Hardness was measured at 44 to 80 mg/L as $\text{CaCO}_3$ . The pH at the beginning of the test was 7.1 - 7.2.

Guideline Criteria	Reported Information
<b>Test Temperature:</b> Depends upon test species; should not deviate by more than 2°C from appropriate temperature.	Test temperature ranged from 9.1 - 16°C throughout test. Appropriate temperature is 12°C for rainbow trout.
<b>Photoperiod:</b> Recommend 16L/8D.	8 hours light for 1st wk. followed by 16 hours light for second week and beyond.
<b>Dosing Apparatus:</b> Intermittent flow proportional diluters or continuous flow serial diluters should be used. A minimum of 5 toxicant concentrations with a dilution factor not greater than 0.5 and controls should be used.	A modified proportional vacuum-siphon diluter volumetrically calibrated to provide a 50% dilution. 5 toxicant concentrations with dilution factor of 0.5 was used.
<b>Toxicant Mixing:</b> 1) Mixing chamber is recommended but not required; 2) Aeration should not be used for mixing; 3) It must be demonstrated that the test solution is completely mixed before intro. into the test system; 4) Flow splitting accuracy must be within 10%.	1) Mixing chamber was used. 2) Aeration was not used for mixing. 3) An average high nominal concentration of 8.29 µg ai/L was provided to each chamber. 4) Flow splitting accuracy was within 5% of desired volumes.
<b>Test Vessels:</b> All glass or glass with stainless steel frame.	Test vessels were glass petri dishes.
<b>Embryo Cups:</b> 120 ml glass jars with bottoms replaced with 40 mesh stainless steel or nylon screen.	80 mm diameter glass petri dishes encircled by 35-µm Nitex mesh with a height of 18 cm. Calculated volume of dish = 904 ml ((4cm²)π x 18cm).
<b>Flow Rate:</b> Flow rates to larval cups should provide 90% replacement in 8-12 hours. Flow rate must maintain DO at above 75% of saturation and maintain the toxicant level.	5.8 volume additions were provided every 24 hrs. DO was maintained above 54% saturation.

Guideline Criteria	Reported Information
<b>Aeration:</b> Dilution water should be aerated to insure DO concentration at or near 100% saturation. Test tanks and embryo cups should not be aerated.	Dilution water was aerated.

Comments: No comments.

#### C. Chemical System:

Guideline Criteria	Reported Information
<b>Concentrations:</b> Minimum of 5 concentrations and a control, all replicated, plus solvent control if appropriate. - Toxicant conc. must be measured in one tank at each toxicant level every week. - One concentration must adversely affect a life stage and one concentration must not affect any life stage.	5 replicated concentrations plus solvent control were used. - Toxicant conc. was measured in each replicate once each week as $^{14}\text{C}$ - AC 303,630 equivalents/L. - One concentration adversely affected a life stage and one concentration did not.
<b>Other Variables:</b> 1) DO must be measured at each conc. at least once a week; 2) Freshwater parameters in a control and one concentration must be analyzed once a week.	1) DO was measured at initiation and once a week thereafter. 2) Freshwater parameters measured once a week.
<b>Solvents:</b> Should not exceed 0.1 ml/L in a flow-through system. Following solvents are acceptable: dimethylformamide, triethylene glycol, methanol, acetone, ethanol.	Dimethylformamide was used. Concentration was maintained at 0.0023 to 0.0029 ml/L.

Comments:

#### 10. REPORTED RESULTS:

Guideline Criteria	Reported Information
--------------------	----------------------

<b>Data Endpoints must include:</b>	<b>Data Endpoints included:</b>
- Number of embryos hatched;	- Number embryos hatched
- Time to hatch;	- Mortality of embryos,
- Mortality of embryos, larvae, and juveniles;	larvae, and juveniles
- Time to swim-up (if approp.);	- Measurement of growth
- Measurement of growth;	- Incidence of pathological or histological effects
- Incidence of pathological or histological effects;	- Observations of other effects.
- Observations of other effects or clinical signs.	<b>Data Endpoints <u>not</u> included:</b>
	- Time to hatch
	- Time to swim-up
<b>Raw data included? (Y/N)</b>	No. Replicate data was not included for hatching time or time to swim-up.

Effects Data:

Toxicant Conc. ( $\mu\text{g}/\text{L}$ )		Percent Hatch		Time to Hatch <sup>a</sup>		Survival #'s (37 days)		Total Length (mm)		Wet weight (gm)	
Nom.	Meas.	A	B	A	B	A	B	A	B	A	B
Ctrl	-	90	88			30	30	40.4	39.3	1.0	0.98
Solv	-	74	84			30	29	38.5	39.2	0.99	1.0
0.624	0.459	75	90			30	30	39.5	40.5	1.04	1.19
1.25	0.907	86	86			30	30	44.2	39.0	1.48	1.12
2.5	1.78	70	90			30	30	40.2	40.8	1.05	1.07
4.99	3.68	80	85			30	30	38.5	37.2	0.81	1.12
9.98	7.64	79	80			30	30	35	-	0.57	-

a      Replicate data on time to hatch was not submitted. Study claimed that hatching began on day 24 and was  $\geq$  95% completed by day 33.

Toxicity Observations:

Hatching success throughout the test ranged from 79% at the 7.64  $\mu\text{g}/\text{L}$  level to 86% at the 0.907  $\mu\text{g}/\text{L}$  level. Survival of juvenile fish ranged from 2% at 7.64  $\mu\text{g}/\text{L}$  to 100% at the 1.78

$\mu\text{g/L}$  level. No abnormalities in behavior or physical appearance were noted in the report.

Statistical Results:

Statistical Method: Analysis of variance (ANOVA) - Dunnett's Test

NOEL: 3.68  $\mu\text{g/L}$       LEL: 7.64  $\mu\text{g/L}$

MATC: 5.30  $\mu\text{g/L}$

Most sensitive endpoint: Reduction in survival

Comments: None

11. Reviewer's Statistical Results: The reviewer verified the results of the statistical analysis.

Statistical Method: Analysis of variance (ANOVA) - Dunnett's test.

NOEL: 3.68  $\mu\text{g/L}$       LEL: 7.64  $\mu\text{g/L}$       MATC: 5.30  $\mu\text{g/L}$

Most sensitive endpoint: Survival of juvenile rainbow trout

Comments: DO level was maintained above 54% saturation. Guideline criteria require that DO concentration must be above 75% saturation. ASTM guidelines recommend maintaining above 60% saturation. For the first 77 days of the exposure phase of the study, dissolved oxygen (DO) was maintained above 75% saturation (with one exception). However, after day 77, DO levels dropped, but stayed above 54% saturation. Further, true toxicological effects based on mortality first appeared at the 7.64  $\mu\text{g/L}$  level on day 38 of the study. The study is therefore classified as Core.

12. COMPLETION OF ONE-LINER FOR STUDY: YES
